

Touchless Sanitizer Dispenser

The ULPI Sanitizer Dispenser is a free-standing, touchless, affordable hand sanitizing station. It can be located in business lobbies, restaurants, schools, universities, offices, hospitals, building entrances, shops, corridors, and so on.

The dispenser is foot operated. By pressing the pedal a shot of soap or alcogel is dispensed from the nozzle at the top of the unit. Bottles of 1L or 750ml can be used.

The foot-operated dispenser encourages community members to reduce the spread of pathogens and prevent infections, including the COVID-19 virus, by adopting frequent hand hygiene as part of their daily routine. To this end, an integrated LED light with motion sensor will prompts passers-by to sanitize their hands.

Because users do not need to touch any part of the dispenser with their hands, the ULPI Touchless Sanitizer Dispenser ensures good hygiene and provides peace of mind to its users.

- Height:
Standard H 1100mm
Schools H 750mm
- Diameter 125mm
