OMEGA VII

NEXT LEVEL OF CONNECTIVITY

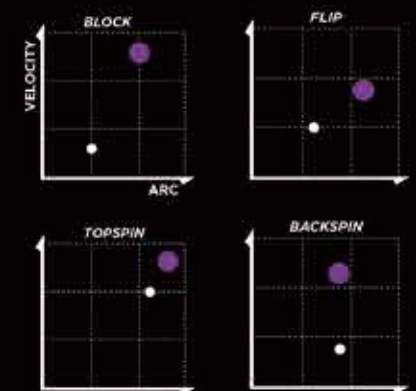

*The best combination of 20 years of accumulated data
that was created by artificial intelligence.*

OMEGA 7 rubbers that make a valid attack when
you hit the ball with more powerful force.

BIGDATA

*Analysis through actual research and data rather than
analysis based on existing market trends*

Lighter, more powerful, significantly improved
OMEGA 7 rubber over traditional rubber

ZETA ASIA

Specialized for close-to-table offensive play

Hardness	Thickness	Color		Sponge Color	Authorized Number
47.5	2.0 / MX	R	B	Creme	002

MADE IN GERMANY

"CARBO SPONGE" is a sponge containing carbon particles. A sponge is a rubber engine. "CARBO SPONGE" harmonizes the characteristics of the sponge and the top-sheet, and interacts with the top-sheet with the force to grip the ball and the catapult effect.

"CARBO GT SPONGE" is the second generation of "CARBO SPONGE", "CARBO SPONGE" which succeeded in reducing the weight of the sponge. Inheriting the performance of the conventional "CARBO SPONGE", you can freely operate hard play without worrying about the weight.

"CST" is an abbreviation of "CHINESE STICKY TECHNOLOGY" and means the world's first adhesive rubber made in Germany. By increasing the topsheet's tackiness, increasing spin and applying extra tension, you can throw a faster ball while creating a larger arc and drive.

"DYNAMIC FRICTION" is a rubber surface processing technology created from snow tires. With plastic balls, conventional rubber cannot be rotated sufficiently. However, the rubber with "DYNAMIC FRICTION" grips the ball firmly and produces more rotation.

"CYCLOID" is an innovative technology that delivers powerful energy to the drive with a new mechanical structure. The natural increase in the arc of the ball prevents net mistakes in the block, and is designed to maximize the penetration of the ball into the opponent's court on the offensive side.

HUGO CALDERANO HAL

Hugo Calderano

HUGO CALDERANO
BRAZIL NATIONAL TEAM PLAYER

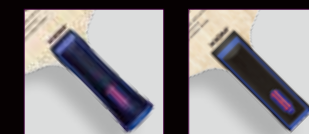

HUGO HAL

The most stable and aggressive super blade

High-end Premium Blade, combined with a special material Hyper Axylium developed by XIOM, which quickly captures vibrations after impact.

The blade maximizes ball grip and soft feeling from Hyper Axylium materials, creating a drive that is always stable for the ball of rotational force. The HUGO HAL satisfies both the attackers who want to boldly score points without fear of mistakes and those who want a stable play that dominates the whole game. You can check your infinite possibilities through the Blade.

FL

Thickness 5.8mm

The size of the grip FL 100 x 25mm ST 100 x 23mm

Average Weight 85g ±

DAMPING FREE SPIN

The characteristics of Axylium fiber, which do not contain carbon, optimize the time and area of the ball touching to produce a strong rotation, and minimize the loss of ball's rotational force after impact on the opposing table.

HYPER AXYLUM

The highest quality Axylium holds the micro-vibration left on the blade faster than any other material after hitting the ball, and helps to deliver 100% energy to the next hitting.

ANGLE FREE

3D Grips made through scanners and motion sensors identify the precise curves of the hand, allowing natural movement without burdening the wrist for any type of hitting method.

MADE IN KOREA

ICE CREAM AZXi

Super Hybrid Blade Used by Korean National Team Player, Jung Young-sik

Front / Axylium Inner X-Carbon
 Back / Zephyllium Inner X-Carbon

ICE CREAM combines stiff and springy Axylium carbon on one side with catapult and Zephylium on the other side with flexible control. Two different characteristics in one blade to adapt to the individual demands of the players fore- and backhand style. The inner carbon technology and Limba surface offer a longer dwell time for more feeling and control.

ICE CREAM AZX

Super Hybrid Blade Used by Korean National Team Player, Jung Young-sik

Front / Axylium Outer X-Carbon
 Back / Zephyllium Outer X-Carbon

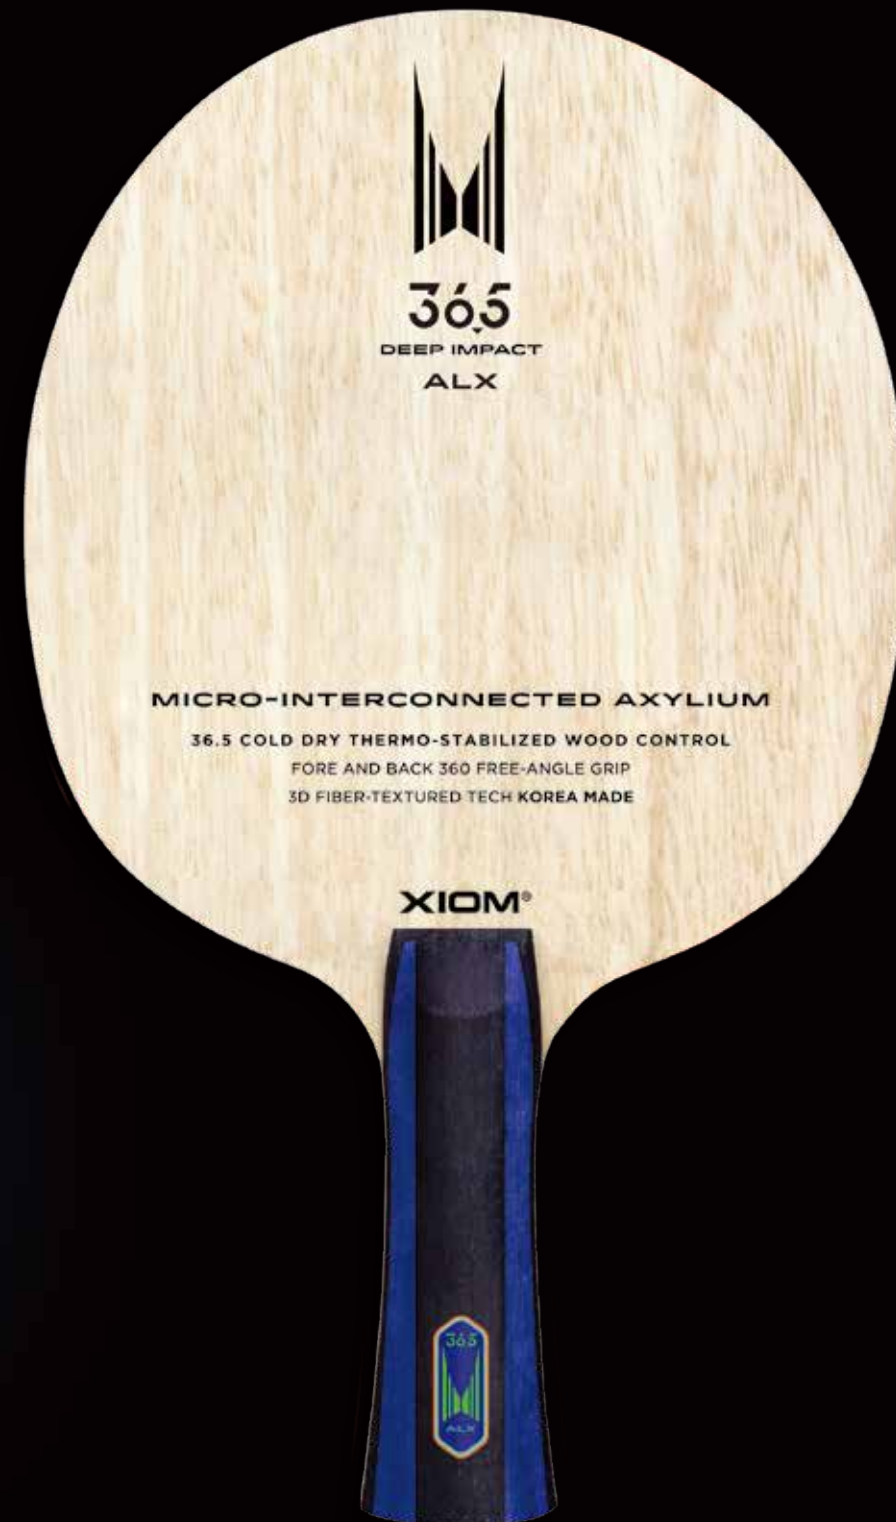

Ice Cream combines stiff and springy Axylium carbon on one side with flexible and hard Zephylium on the other side. Two different characteristics in one blade to adapt to the individual demands of the players fore- and backhand style. The outer carbon technology and Koto surface enable a very direct and crispy contact. Great for aggressive playing style.

36.5

Excellent performance with **COLD PRESS** manufacturing technology

36.5 is an outer Axylum blade with Koto outer ply for powerful play close to the table. The new "COLD PRESS" technology provides a softer topsheet and offers a better feeling for the ball while maintaining the crispy contact. This makes the blade easier to play without losing speed.

Unlike traditional blade manufacturing methods that dry at high temperatures, 36.5 blade features the industry-first low temperature drying technology. Unleash the natural performance of the wooden board to the best.

MICRO
AXYLUM

Overshot weaving the finest carbon and Axylum in an original way by micro unit controlling the core structure of carbon.

ANGLE
FREE

The grip, made of the 3D scanner and motion sensor, allows for precise and natural movement without straining the wrist.
