מְרֻשָּׁת הַדְּבָרִים, IoT

ד"ר דן קופרמן

שער ראשון

הגדרות

The internet

“A **global network of interconnected computer hardware and software systems**, making possible the **storage, retrieval, circulation, and processing** of information and communication across time and space”. (Slavin, 2007)

Actually, an internet of computers!

Due to social media, Internet of people

The data is created by people and used by people.

What is Internet of Things?

מהי מְרֻשָּׁת ת הַדְּבָרִים?

“A network of **physical objects** that contains embedded technology to **communicate** and **sense or interact with their internal states or the external environment.**” (Gartner, 2017).

A “things” is comprised of:

A Product: the technical resource, needed to monitor or interact with an **Entity of Interest** (any object, its state, attributes or properties). The product itself can be The Entity of Interest

Connectivity: the resources that provide the technical link to access the product.

Application : provides the interface to monitor and control the product over the web.

Can a dog be a things?

Early IoT milestones

- 1969- **The Internet**, Advanced Research Project Agency Network (ARPANET) used by academic and research fraternity.
- 1973 - **RFID** (Radio-Frequency Identification).
- 1974 - Embedded computer system, implemented using **single board computers and microcontrollers** embedded in a bigger system.
- 1984 - **First thing?** A coke machine was connected to internet to report the availability and temperature of the drink.

School of Computer Science

THE INTERNET OF THINGS

AN EXPLOSION OF CONNECTED POSSIBILITY

BILLIONS OF DEVICES

Fig. 3.10 IoTconnected devices installed base worldwide from 2015 to 2025 (in billions) [83]

What can we apply on the things?

Monitoring

Optimization

Control

Automation

Control

I am smart!

Cyber-Physical Systems (CPS)

Cyber-Physical Systems (CPS)

A system “of collaborating computational entities which are in intensive **connection with the surrounding physical world** and its on-going processes, providing and using, at the same time, **data-accessing and data-processing services available on the internet**.”

What can we apply with the things?

Monitoring

CPS ?

Control

Optimization

Automation

Optimization

Smart, connected products can **apply algorithms and analytics** to in-use or historical data to dramatically **improve output, utilization, and efficiency**.

Automation

Monitoring, control, and optimization capabilities combine to allow smart, connected products to achieve a previously unattainable level of **autonomy**.

At the simplest level is autonomous product. More-sophisticated products are able to **learn about their environment, self-diagnose their own service needs, and adapt to users' preferences**.

What can we apply with the things?

Monitoring

Optimization

Control

Our Things

In order to create a thing, we need to learn to:

1. Create a product.
2. Create the digital representation of the product (a web server).
3. Program the product to be a client.
4. Connect the product to its digital representation on the server.
5. Create a web user interface (UI).
6. Connect the UI to its digital representation on the server.

The platforms we will explore

Device: The digital representation of the product (**Assets**).

Pinboard: The web UI for monitoring and control of our product.

Roles: Internal control roles that can be applied on the **Assets**.

Connect your hardware

Connect a device and start visualizing your data

Lab exercise 1: your smartphone as a “thing”

1. Sign in to AllThingsTalk Maker.
2. Press on **Devices** and then on **CONNECT A DEVICE**.
3. At the end of the list of devices you will find **Your smartphone**, press on it.
4. Scann the QR code that appears at the right.
5. Eight **Assets** will appear for your device (6 sensors and 2 actuators). Notice that are a few types of assets (in this case, Strings, Objects, Booleans, and Number).
6. Press on **Pinboards**, create and name a pinboard.
7. Add to you pinboard 2 sensors and 2 actuator.
8. Make sure you can sense and actuate!
9. Add **Rules** to receive an indication when your battery drops below a specified value.

The image features a central black circle containing the text "The End." in a white, cursive script. A white underline is positioned beneath the text. The background consists of concentric, slightly irregular circles in various shades of brown and orange, creating a hypnotic or tunnel-like effect.

The End.
