## Petrovsky's Criteria for Assessing Investment Risks in Mining

With satisfaction we are happy to inform you about the appearance of a new outstanding service "Assessment of investment risks in mining according to Petrovsky's criteria."

This is the world's first comprehensive in-depth assessment for appraisal investment risks in mining.

**With the advent of this deep assessment, you can already know the development of events for several decades ahead.**

We do not have competitors. We are the only ones who have the necessary knowledge and we are ready to share with you.

We have created precise criteria for the assessment of investment risks in mining.

**As a result, you get a realistic scenario of the most likely development of this mining enterprise.**

You will receive diagrams that indicate the risks for each of the criteria. **You can compare a lot of options and choose the best, not what they impose on you.**

You can easily see for yourself.

To date, the solution for investing in mining is often taken on the basis of advice, recommendations, the presence of well-known names in the project, the likes on the Internet, etc. So-called "competitors" do not have comprehensive knowledge in this matter, they do not have criteria. They do not understand the causal relationship. They are superficial, highly specialized, and they do not see the fullness and depth of the whole picture at the mining.

**Therefore, often a regular assessment of risks in mining production turns into fortune-telling on the coffee grounds without any exact criteria.**

It easily allows errors in the calculation of risks in 50-100% or more. Think about these numbers, gentlemen! Do we live in the time of Mark Twain? In this regard, banks and investors lose their money, because they do not observe the real situation in the mining business. A large amount of unjustified investment is channeled into guaranteed "dead projects". It uses fashionable terms, directions, lists, brilliant presentations and press releases, etc. This is often not worth anything except words. It is selling fields that are not mineral deposits!

Those who are led by these beautiful promises have irretrievably lost their money.

**But the entire investment situation can be successfully calculated and identified using exact sciences, our deep knowledge and great experience in mining.**

Imagine that you can predict the financial catastrophe of a mining enterprise or its success is much more early (10-20 years before this event) !?

**You really can do it with us!**

**These are not just words. Our assessment of risks is made on the strict calculation.**

We work extensively and deeply at the junction of several sciences. Our assessment is impartial and objective.

We do not know who the stakeholders are and we do not want to know. You can

contact us at any time and on condition of anonymity.

The cost of calculating investment risks for one project or field is 20,000 US dollars.

**Think independently on a global scale! Invest in the best!**

**Ph.D. Natalia Petrovskaya and Ph.D. Igor Bobin**

**Note:** Despite the grinding the teeth of unscrupulous opponents, the authority of Ph.D. Natalia Petrovskaya in the mining industry is higher in the world than ever. Everyone is trying to get her advice (to give it as its own wisdom). Get the genuine advice from the famous guru - Ph.D. Petrovskaya - order a deep assessment of investment risks in mining and get a 50% discount for the next service (evaluation or consultation)!

**We wish you success in business!**

*We do not have intermediaries. You can contact us directly:*
