

4MOST NEWSLETTER - OCTOBER 2020

Businesses of all sizes still have the belief that simply having a cybersecurity strategy and implementing the right policies and procedures is the answer to protect themselves. In reality, much more is needed to achieve strong defenses in today's heightened threat landscape. Some data breaches can easily be avoided, but have successfully infiltrated systems due to a lack of awareness and knowledge within a company. To achieve optimal cybersecurity, businesses must optimize their resources to ensure that they adopt the right culture and attitude towards it.

What's in store for you in this month's newsletter:

1. Five ways to protect your Business from Cybercrime.
2. The five most common Cybersecurity Risks - How to fight back.
3. Why It's Critical for Small or Medium-Sized Businesses to Have a Disaster Recovery Plan.
4. SAP Business One: Disaster Recovery Plan & Checklist
5. Staying Ahead Of Insidious New Breeds Of Cyber Attacks

Five Ways To Protect Your Business From Cybercrime

These days, businesses have less reason to fear burglars and thugs than anonymous cybercriminals. While thieves can steal merchandise or damage property, cybercriminals are much more insidious, and the harm they cause can be orders of magnitude worse. When sensitive information is stolen or financial accounts are hacked, the losses can overwhelm even the most spectacular robbery.

The Five Most Common Cybersecurity Risks – And How To Fight Back

I guess mom is always right: we should never trust a stranger. Unfortunately, most of us don't heed this advice when exchanging sensitive personal data and interacting freely across wireless and digital communication channels. From stolen intellectual property and customer data to operation shutdowns that leave people vulnerable, news headlines are giving us every reason to reconsider our false sense of security in the digital technology we use.

Why It's Critical for Small or Medium-Sized Businesses to Have a Disaster Recovery Plan

Research shows that in the last five years, more than 54% of companies in the world experienced downtime that lasted longer than 8 hours – that's a loss of one entire day of work. Only 2 percent of companies were able to recover in under one hour! Quick responsiveness is the hallmark of enterprising organizations. In this highly-competitive marketplace, even a half hour of delay can lead to businesses missing out on valuable opportunities. This is especially so for small and medium-sized companies, who already have competition from local businesses and multi-national corporations.

SAP Business One: Disaster Recovery Plan & Checklist

A boon for small and medium sized businesses, SAP Business One is an ERP solution with a focus to automate business functions like financial management, operations management, and human resource management. Its architecture is a typical client-server model where client software is a Microsoft Windows-based product that connects with back-end server whereas server software runs on Microsoft SQL server database or SAP HANA Database. Though the tool comes with several benefits that we have listed below, it also requires a comprehensive disaster recovery plan.
