

4MOST NEWSLETTER - SEPTEMBER 2019

We recently hosted a launch event for one of our clients, Valoworx 266 CC, in celebration of successful implementation of their SAP Business One solution. This was the first event of its kind and we look forward to celebrating with more of our clients as they reach the same milestone. We again extend our congratulations to Valoworx and look forward to remaining with them as they grow.

In this month's edition we take a look at the most common types of cyber attacks and how to protect your IT infrastructure against them.

The vulnerability of IT infrastructure and the constant threat of cyber attacks is a critical issue that not only every business encounters but that which individuals face too. Cybercrime is on the rise and has become increasingly sophisticated. We encourage you to read the articles below dedicated to this subject matter.

What's in store for you in this month's newsletter:

1. Why Vulnerability In IT Infrastructure Is A Force Majeure In The Digital World
2. Staying Ahead Of Insidious New Breeds Of Cyber Attacks
3. Employees: Your Strongest Or Weakest Link In Cybersecurity

Why Vulnerability In IT Infrastructure Is A Force Majeure In The Digital World

You might run a midsize business or even a multinational corporation with a completely automated infrastructure; no matter your company size, cybersecurity has become a significant concern for everyone in the business world. It is one of the biggest threats to organizations and individuals around the globe. Nobody is immune to it, and anyone can become the next victim. Therefore, prevention measures have surpassed the status of being just an option and moved straight to a requirement.

As we're living in a digitized corporate environment that is constantly evolving, every industry is looking into efficient ways of dealing with cybersecurity. At the same time, cybersecurity is inspiring some of the most significant breakthroughs in the digital world. Can we really say that vulnerability in IT infrastructure is a force majeure in the digital world?

Employees: Your Strongest Or Weakest Link In Cybersecurity

A business organization can come up with detailed and advanced cybersecurity strategies, but it's impossible to fully secure the business without help from your employees. And in many cases, employees prove to be the weakest link in the chain.
