Apparel & Footwear

Apparel & Footwear for SAP® Business One.

Now Fashion companies can grow from Small to Extra Large with Apparel & Footwear for SAP® Business One

Many small fashion businesses want to generate income while increasing profit margins. But doing so can be difficult without a full view of the entire business – from financials to customer relationships, from style conception to delivery, it is all integrated into a single suite. Apparel and Footwear is a vertical solution for the fashion and footwear industries tightly integrated to SAP® Business One.

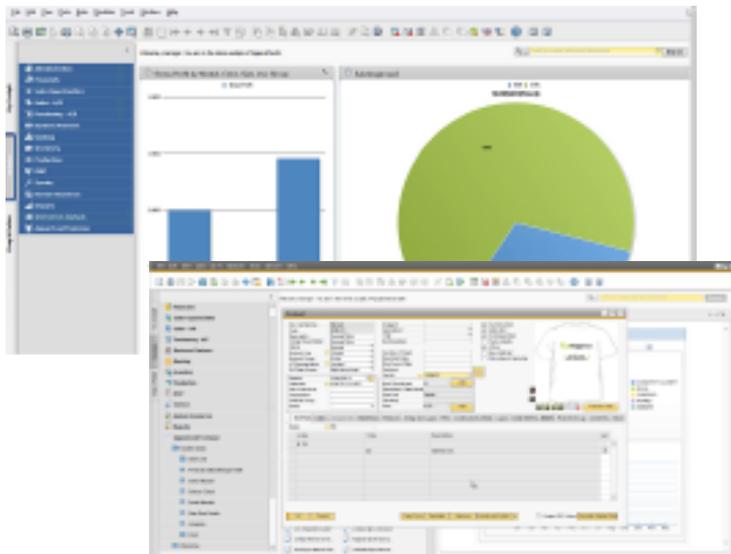

SAP® Certified
SAP Business One Integration

SAP® Qualified
Solution for SAP Business One

Apparel & Footwear for SAP® Business One.

Apparel & Footwear B1 PLM collaborative suite of applications facilitates the management of products, from design all the way through production.

Apparel & Footwear for SAP® Business One.

Product Lifecycle Management (PLM)

It will enable you to innovate faster every season all integrated into the core of SAP Business One.

Attribute Control and Product Segmentation

Apparel and Footwear multi attribute capabilities enables companies to use attributes as a complement to item numbers. It is an optimal solution for all environments with graded products.

It supports the grading process from supply, through warehouse activities, to order fulfillment.

SKU and Bill of Material complexity

In textile, apparel, and footwear companies, SKU and Bill of Material complexity is a challenge that you face across your supply chain systems.

With Apparel and Footwear for SAP Business One dimensional capability, you will be able to manage your data at the end item level to successfully forecast, plan, and manufacture your product, delivering the right product and controlling your inventories.

Production and Purchasing

Generate production stages templates for your styles. Enable the Advanced Planning & Scheduling for complex factory processes.

Sales Order Entry

Season and off-season order entry could be a painful process in fashion companies.

Product Data Management (PDM)

Apparel & Footwear Product data management (PDM) serves as a central knowledge repository for process and product history, and promotes integration and data exchange.

Manage Images, Colors, Materials, POMs

Manage raw materials and labor costs. Add Point of measures based on templates. Generate SKU information directly from the product data management.

TechPacks

Generate dynamics techpacks for each style according to the stage, including general data, Point of Measures, Bill of Materials, Colorways, etc.

Sales Force Automation (SFA)

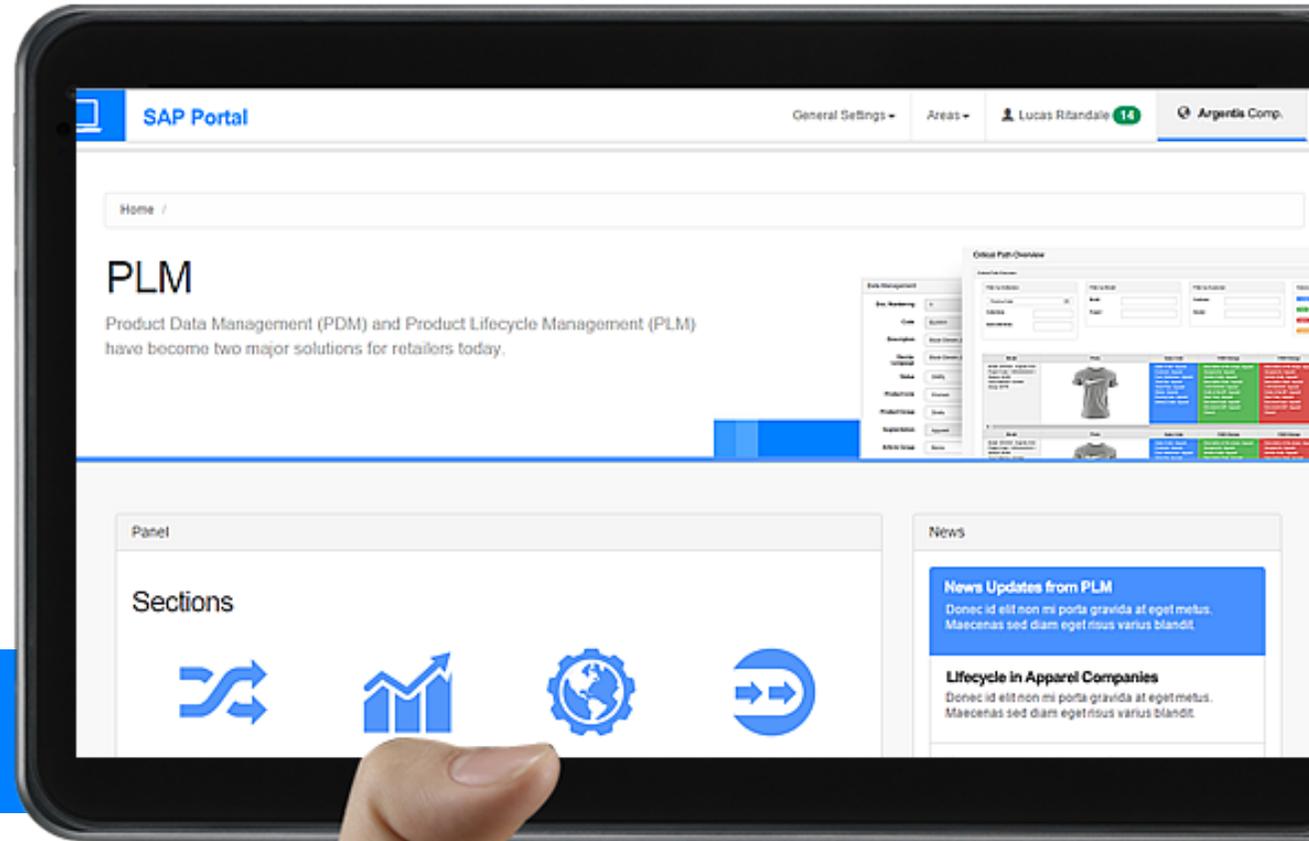

Use the Web to earn revenue and provide more services to your customers. Apparel and footwear offers web presence for your sales employees and users.

Web PLM

Track product development, update critical path activities, and interact with vendors and customers.

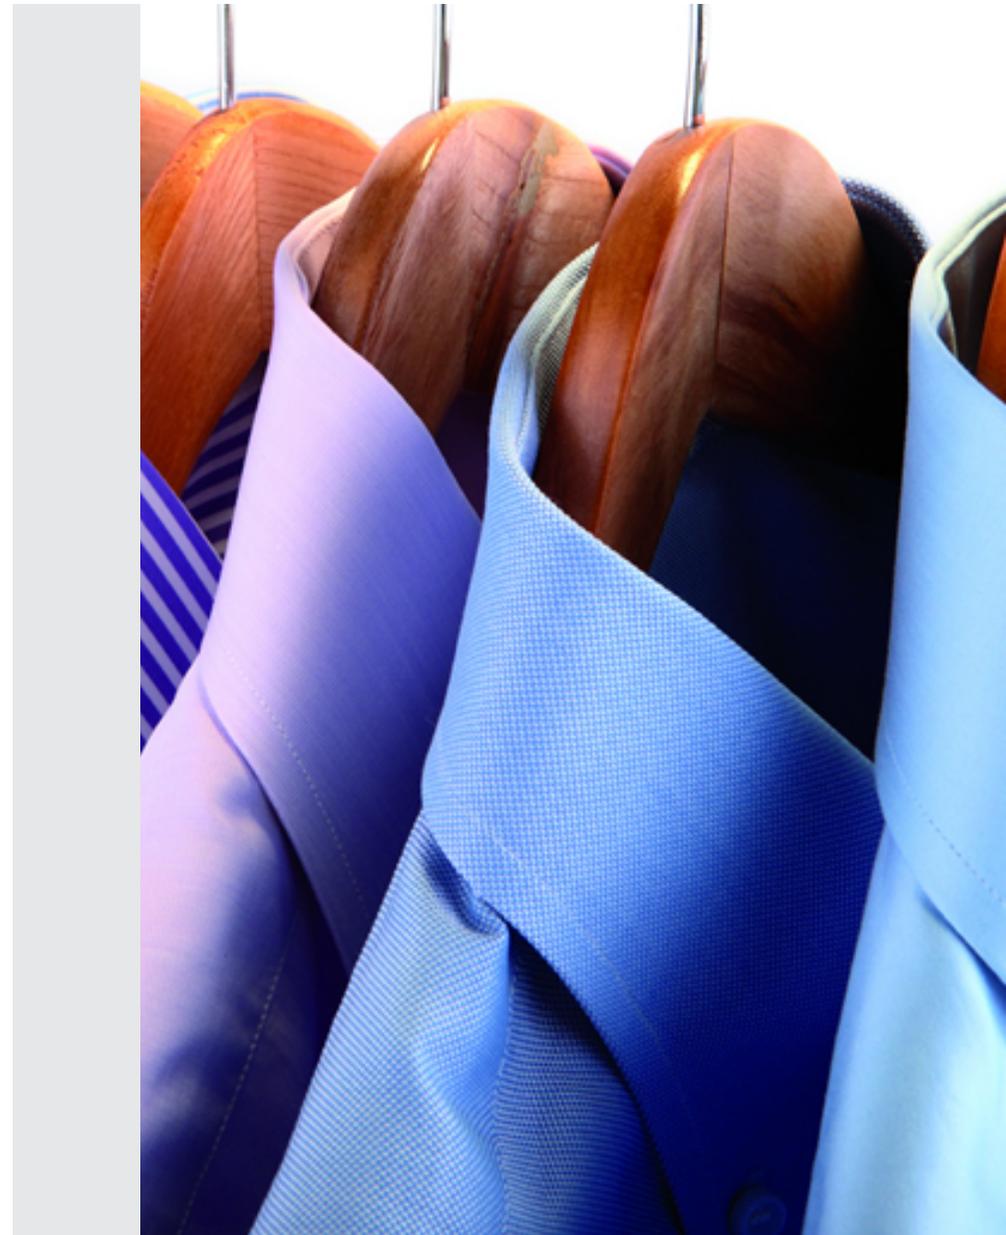

SAP® Business One Product Lifecycle Management

Apparel & Footwear for SAP® Business One.

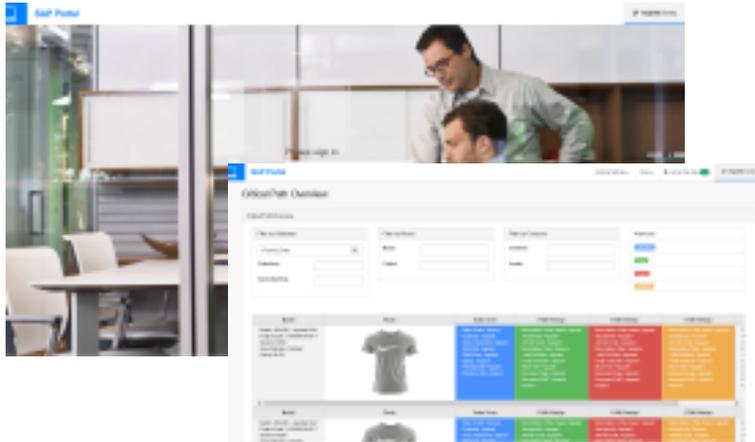

Product Data Management (PDM) and Product Lifecycle Management (PLM).

AFSB1 PDM/PLM (Product Lifecycle Management) is fully integrated to the SAP® Business One suite. As a result, every bit of the information is captured within a single solution system from which all reports and analyses may be made.

Get the power of Apparel & Footwear for SAP® Business One in your hands. As apparel companies and employees are becoming more mobile everyday, and your solution must follow this trend.

Gerber Technology's YuniquePLM system delivers robust PLM functionality in the office or on the go. Information created at the office can be browsed globally from standard mobile devices like smartphones and tablets

The Apparel & Footwear PLM / PDM is based on four main concepts:

Product development

A database common to all departments concerned (Styles, inventory, accounting, logistics).

Workflow management

Tasks assigned to users, Concept Management and product development guided by a "To Do List".

Purchase Vendor Management

Access to the collected information through the interface by suppliers, subcontractors or external production facilities.

Unified Version

All data stored in the same repository. Every bit of the information is captured within a single solution. PLM and ERP.

Key Benefits

- Reduced product development costs.
- Manage critical paths from development request to delivery.
- Manage the entire development process from initial product/range by season conception to delivery and selection of samples.
- Deploy either an ERP integrated or web based collaborative environment including customers, suppliers, factories.
- Deliver a central resource and knowledge for all new product development in an unified ERP version allowing both cost and error reduction.
- Understand more precisely movements and activity in the supply chain.
- Ensure samples and finished products arrive on time and to the correct specification.
- Enables suppliers, consolidators and all supply chain parties real time updates for purchase order progression .

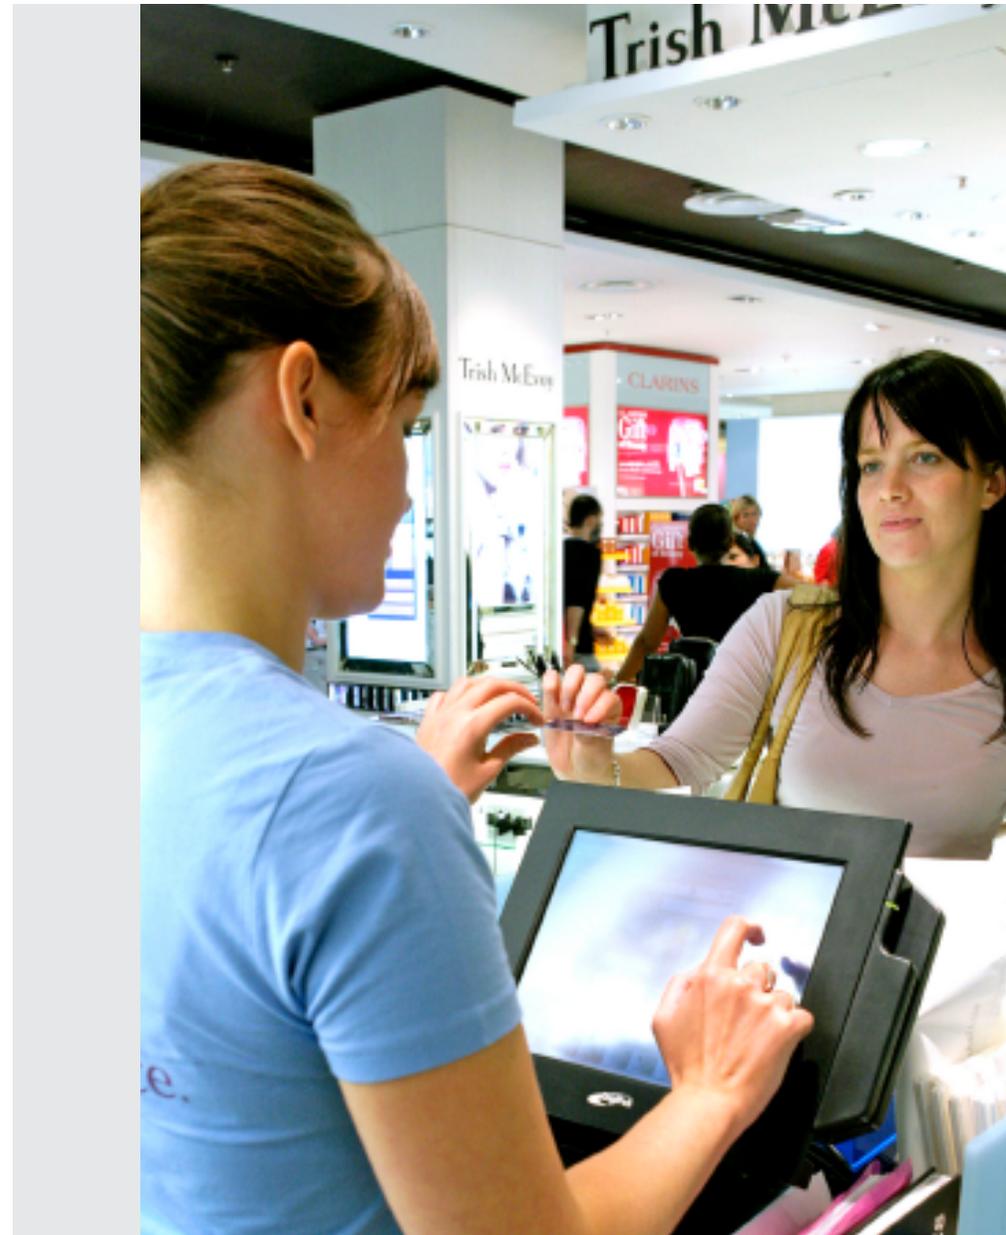

SAP® Business One

Warehouse Management System

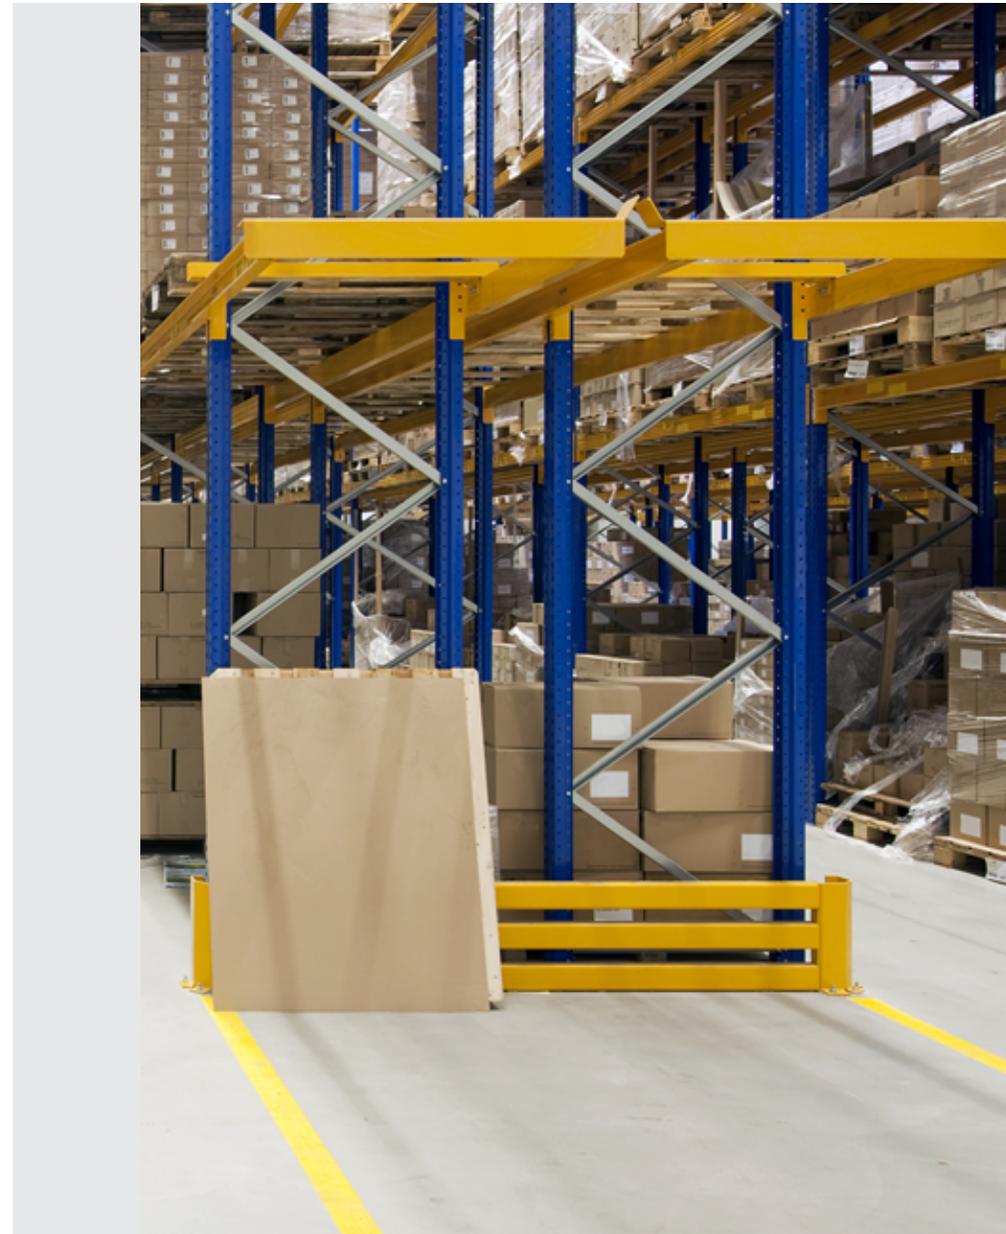

Apparel & Footwear for SAP® Business One.

The most affordable and functional Warehouse solution for SAP® Business One

Today almost no one doubts that a company must have a warehouse management system in real time. WMS works in real-time, allowing certain operations to directly save costs. The operator does not need to move to get authorization for the next task.

Cost savings depend on the difference of operation before and after the implementation of a WMS, but for a conventional warehouse, there is widespread criteria of 25 % of direct cost savings in staff. Direct cost savings translate into a reduced need for investment or increased capacity.

A warehouse management system in real time tells you whether it is necessary to invest in resources, to reduce logistics costs and to improve customer service.

Functionalities

- Complete architecture Warehouse definition:
 - Location, fix products directly in SAP.
 - Speed up the process of entering purchase orders / Reserve invoices to be received by the handheld.
