

## 4MOST NEWSLETTER - FEBRUARY 2022

As things returned to "normal" we at 4most would like to thank you, our customers for your continuous support. All the 4most staff are working from the office and we have a full "home" to support our clients.

### What's in store for you in this month's newsletter:

1. SAP Process Automation: Accelerate Automation with a New No-Code Experience
2. Acknowledging SAP's Concrete Steps to Tackle Climate and Social Challenges
3. What Is ERP?
4. SAP Business One - Tip of the Week

## SAP Process Automation: Accelerate Automation with a New No-Code Experience

SAP Process Automation — a simpler way to enhance business efficiency and agility with confidence — is now generally available, providing a powerful new tool for businesses looking to create value faster.

Previewed last year at SAP TechEd, SAP Process Automation combines the capabilities of SAP Workflow Management and SAP Intelligent Robotic Process Automation in an easy-to-use, no-code experience powered by artificial intelligence (AI).

## Acknowledging SAP's Concrete Steps to Tackle Climate and Social Challenges

Today's business leaders incorporate environmental and social governance metrics into their core strategy and use it to guide investment choices, product development, human capital agenda, and corporate reputation.

To help customers reinvent themselves and become intelligent and sustainable enterprises, SAP has strengthened its commitments and pledges. We are helping our customers be sustainably profitable and profitability sustainable.

From accelerating the goal to achieve net-zero emissions across SAP's value chain by 2030 rather than 2050 to delivering solutions that enable customers to measure carbon emissions, reduce waste, and integrate financial and non-financial metrics, SAP is delivering its promise to help customers run better, all the while serving its higher purpose to improve people lives.

## What Is ERP?

ERP stands for enterprise resource planning, but what does ERP mean? The simplest way to define ERP is to think about all the core business processes needed to run a company: finance, HR, manufacturing, supply chain, services, procurement, and others. At its most basic level, ERP helps to efficiently manage all these processes in an integrated system. It is often referred to as the system of record of the organization.

Yet today's ERP systems are anything but basic and have little resemblance to the ERP of decades ago. They are now delivered via the cloud and use the latest technologies – such as artificial intelligence (AI) and machine learning – to provide intelligent automation, greater efficiency, and instant insight across the business. Modern ERP software also connects internal operations with business partners and networks around the world, giving companies the collaboration, agility, and speed they need to be competitive today.

## Apply New Order to Document Lines

Lists are great, right? We create and use lists in almost every aspects of our lives. List of pros & cons, ingredients for birthday cake, list of account balances... but - in every list only one item can be the first. You could claim that it doesn't matter – after all, when baking a cake the flour and eggs are equally important regardless their position in the list. That might be the case with recipes, but in many other cases the sequence of items in a list is highly significant.
