

4MOST NEWSLETTER - SEPTEMBER 2022

What's in store for you in this month's newsletter:

1. SAP Recognized as a Leader in 2022 Gartner® Magic Quadrant™ for Data Integration Tools
2. SAP Business One Tip of the Week
3. Top 10 benefits of cloud ERP systems
4. The Future of Analytics: How to Make Sense of Data and Mitigate Business-Critical Risks

SAP Recognized as a Leader in 2022 Gartner® Magic Quadrant™ for Data Integration Tools

We are proud to announce that Gartner has recognized SAP as a Leader in its 2022 Magic Quadrant for Data Integration Tools for the 15th consecutive year.

Today, data has become an engine of value creation. Organizations are forging new data strategies to derive meaningful insights and accelerate their innovation. Yet, many organizations struggle to derive value because their data is siloed across heterogeneous and distributed environments.

By leveraging the right data integration tools, organizations can easily discover, connect, integrate, govern, and orchestrate their data assets. SAP's data integration offerings deliver trusted, relevant, and timely information to drive better business outcomes for our customers. Our solutions include SAP Data Intelligence Cloud, SAP Data Services, SAP Landscape Transformation Replication Server, SAP Integration Suite, and integration capabilities of the SAP HANA platform. These offerings are part of SAP Business Technology Platform (SAP BTP).

Show Price List Info in Document Lines

From "Priceless" to "Everyone has their price", pricing has always been complicated and in some cases even mysterious. After all low price doesn't necessarily guarantee high volume sales, and high price may make a product more appealing and increase demand – no wonder pricing has become a science that weighs multiple variables that keep changing all the time to a number. While the theory, methods and trends are very interesting, there is very little room for pricing errors when running a business.

By Ari Schapira - Chief Product Owner, SAP Business One at SAP

Top 10 benefits of cloud ERP systems

Change is constant – but the pace has never been more relentless than it is today. From supply chain shortages and rising gas prices to inflation and shifting customer needs, it's a struggle for businesses to keep up. Increasingly, they need smart and automated processes that can adapt to any scenario. They need innovative technology to support new business models. And they need real time – and predictive – insights to steer the ship in the right direction.

The Future of Analytics: How to Make Sense of Data and Mitigate Business-Critical Risks

By using new forms of databases and machine learning algorithms, real-time data processing capabilities, and the development of self-service analytics and data marketplaces, SAP enables customers to base decisions on intelligent data-driven insights.

Sight, hearing, smell, taste, and touch: the classic five senses of humans allow us to experience the world around us, with our nervous system receiving and processing huge amounts of information and relaying signals to the brain in order to react with the world. It is almost impossible to say how much data the human brain receives and processes on a daily basis. At best, one can specify a lower limit of perhaps around 1,000 gigabytes.

Humans not only process but also generate data in abundance. How many Instagram Stories did you click through last night before falling asleep in bed? How much time did you spend on different news portals? Just one more episode of "Stranger Things" on Netflix? The list goes on and on.
